P. Sai Teja

Software Engineer · AI/ML · Data Science · Industrial Automation
saitejakgp2019@gmail.com | +91-9064255783 | LinkedIn | GitHub | Portfolio

PROFESSIONAL SUMMARY

Electronics and Computer Science Engineering undergraduate at KIIT (2023–2027) with hands-on experience in software development, machine learning, computer vision, and industrial automation. Proficient in Python, Java, and SQL with strong foundations in SDLC, OOP, and data structures and algorithms. Delivered 3+ end-to-end AI/ML projects with measurable outcomes and contributed to automation improvements at Tata Steel. Currently serving as a Google Campus Ambassador, with proven ability to lead events for 500+ students and drive cross-functional collaboration.

TECHNICAL SKILLS

Languages: Python, Java, SQL — OOP, Data Structures and Algorithms, SDLC
AI/ML: Machine Learning, Computer Vision, OpenCV, Scikit-learn, Pandas, NumPy, Deep Learning
Web & Deployment: HTML, CSS, Streamlit, REST APIs
Automation: PLC Programming (Siemens S7-300, S7-400, S7-1500), Raspberry Pi, Industrial Automation
Tools: Git, GitHub, Google Colab, Agile, Technical Documentation

EXPERIENCE

Campus Ambassador · *Google* — *Aug 2025 – Present*

- Represent Google's developer ecosystem across KIIT, promoting tools and programs to 500+ students on campus.
- Organize 4+ Google-sponsored workshops and tech events, achieving 100+ attendees per session.
- Actively drive the adoption of Google developer tools and programs within the KIIT tech community.

Industrial Automation Trainee · *Tata Steel* — *May 2025 – Jun 2025*

- Engineered and tested PLC-based automation for blast furnace operations using Siemens S7-300, S7-400, and S7-1500 across a 6-point manual control system.
- Identified 3+ critical inefficiencies through gap analysis and proposed solutions estimated to reduce operational downtime by 15%.
- Delivered 2 technical reports documenting system workflows, improving cross-team knowledge transfer and visibility.

Administration Member · *Coding Ninjas – KIIT Chapter* — *Aug 2025 – Present*

- Coordinate 10+ coding competitions, workshops, and technical events, which grew chapter membership by 25%.
- Streamline administrative workflows for a 50+ member chapter, reducing planning overhead by 20%.

PROJECTS

AI-Powered Multi-Disease Prediction System · *Python · Scikit-learn · Streamlit · Pandas*

- Developed 3 ML classification models to predict diabetes, heart disease, and kidney disease from datasets of 1,000+ records each.
- Achieved up to 85% prediction accuracy through feature engineering, hyperparameter tuning, and 5-fold cross-validation.
- Deployed the system as an interactive web application using Streamlit, enabling real-time predictions with sub-second response time.

Driver Drowsiness Detection System · *Python · OpenCV · Computer Vision*

- Built a real-time facial landmark detection pipeline using the Eye Aspect Ratio (EAR) algorithm, processing 30 FPS video streams.
- Triggered drowsiness alerts within 1–2 seconds, reducing simulated accident risk by 40% compared to a no-alert baseline.

Smart Traffic Light System – Prototype · *Raspberry Pi · Python · Embedded Systems*

- Designed an adaptive traffic signal control system using Raspberry Pi, dynamically managing signal timing across 4 lanes.
- Demonstrated a 20–25% reduction in traffic violations and near-miss incidents in simulations compared to fixed-timer systems.

EDUCATION

B.Tech – Electronics and Computer Science Engineering — KIIT, Bhubaneswar — *2023 – 2027*

Class XII – Science (CBSE) — Narayana Junior College, Visakhapatnam — *2023*

Class X (ICSE) — Christopher Day School, Kharagpur — *2021*
